Art Unit: 1752

#### **DETAILED ACTION**

1. This is a first office action responsive to the filing of this instant application on November 10, 2005; claims 1-13 are pending.

## Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 15 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 15 is unclear with respect to use of the apparatus and the step pf processing of the material of claim 1. The imagewise exposed and the thermally developing steps appear to be not related to the use of the thermally developing apparatus. The process contains no actual steps. The imagewised exposing step and thermally developing step should be performed in imagewise exposure portion and thermal developing portion of the thermal developing apparatus.

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/849,515 Page 3

Art Unit: 1752

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

6. Claims 1-15 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative,

under 35 U.S.C. 103(a) as obvious over Oyamada (US 20040229173).

See Oyamada, the back-surface protective layer contains gelatin and polymer latex Table 4 page

67; the glass temperature (Tg) of latex polymer in at least one of the surface protective layer

and the back-surface protective layer preferably in the range of -30 °C to 40 °C, more preferably

-30 °C to 40 °C on page 3, [0043]. See also the document as a whole including the apparatus in

Fig.1, the fluorocarbon of formula (1) on page 16 and pages 80-81, claims 1-22. Oyamada et al

preferred the back surface layer having glass transition temperature from -30 °C to 20 °C

claimed in column page 4, lines 3. Therefore the invention as claimed lacks novelty.

Alternatively, it would have been obvious to the worker of ordinary skill in the art to use the

polymer latex polymer having glass transition temperature with the scope of -30 °C to 40 °C

with an expectation of success.

7. Claims 1-15 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative,

under 35 U.S.C. 103(a) as obvious over Inoue (US 2004/0033449). See page 71, Table 6,

samples 2-3 to 2-8 wherein the back side layer contains a polymer latex having glass transition

temperature of 18 °C and gelatin within the scope of the water soluble and polymer latex having

glass transition temperature of -30 °C to 24 °C presented in the claimed invention. Therefore,

the invention as claimed lacks novelty. Alternatively, it would have been obvious to the worker

Art Unit: 1752

of ordinary skill in the art at the time the invention was made to use the polymer latex having glass transition of -30 °C to 120 °C such as disclosed by Inoue on page 78, claims 9-21 with an expectation of success.

### **Double Patenting**

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 1-14 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 9, 14-17, of copending Application No. 10/408,574. Although the conflicting claims are not identical, they are not patentably distinct from each other because the invention as claimed wholly encompasses the scope of the invention claimed in the copending application. Both claims invention are directed to the back protective layer having water-soluble polymer and polymer latex with overlapped glass transition temperature.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

10. Claim 1 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 6, 7, 9 of copending Application No. 10/837,674. Although the conflicting claims are not identical, they are not patentably distinct from each other because both claimed invention are directed to photothermographic material having back surface protective layer containing a water-soluble polymer such as gelatin and the polymer latex with overlapped glass transition temperature.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Conclusion

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

12. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Thorl Chea whose telephone number is (571) 272-1328. The

examiner can normally be reached on 9 AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Cynthia H. Kelly can be reached on (571)272-1526. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
